

# CV (English)

## Senior Software Developer

### About me

Hi! I'm Soslan, and I'm working as a software engineer for more than twelve years.

Fun fact about me: I prefer fixing bugs over feature development (it doesn't mean I can't do both) :)

Another fact: I love mentoring newbies, enhancing docs, and working with tech debt to make the project better and more pleasant to work with.

For the last 7-8 years I mostly use JavaScript (Node.js), and the list of languages I've worked with also includes Python (about 1.5 years of experience, so it's not like I know it on a senior level), PHP (about 3 years, but it was so long ago, so I'm not sure I still know it), and Go (on a kinda junior level). I also like functional programming, and I know some Haskell – although I've never used it for production development.

I did a lot of VoIP stuff before (Asterisk, FreeSWITCH, Kamailio, OpenSIPs, Drachtio, etc.) before. However, my recent work mostly relates to web backend development, and sometimes I am forced to do various DevOps stuff.

And here's a short list of things I know and meet often in my work:

- backend development: JavaScript (Node.js) (on a good enough level), Python, PHP, Go (all of them on a kinda junior level), Haskell (on a «I've just started» level)
- frameworks: Express, Koa, Nest.js, Django, Flask, FastAPI (yeah, there are Python frameworks here, but please don't invite me on «Senior Python Developer» positions)
- databases: Postgres, MySQL, MongoDB, Redis
- message queues: RabbitMQ, AWS SQS, Redis (yeah, it's here as well, thanks to pub/sub)
- VoIP: Asterisk, FreeSWITCH, Kamailio/OpenSIPs, Drachtio, WebRTC
- Amazon AWS, GCP
- Docker, Kubernetes (I mean, I know K8s on a junior level with Google, but I'm still not a real DevOps engineer)
- Ansible, Chef (just a little bit)

- Linux (again: I can deploy my app in any language, Node.js, Python, PHP, whatever. I can use Nginx and proxy requests to these apps. I can set up SSL. I can do a lot more – but I’m definitely not the person you can call a Linux guru
- CI/CD (again: please let your DevOps engineer do that. But yeah, I can set up the GitLab pipeline and touched Jenkins once)
- soft skills – yeah, I have them. I thought just to end with that, but let me tell you a little more about it. I am kinda super-shy at the start, then it gets better, but I am always polite, never ignore people, very helpful, so I’m good enough

Feel free to contact me with any questions – and looking forward to work with you soon!

## Experience

### Profi (2021 - 2022)

Senior Software Developer

#### Technology Stack

- Node.js, TypeScript, (with JS 12 legacy) Express
- PostgreSQL, Redis
- AWS Cloudwatch

#### Responsibilities and Achievements

- added all tooling and helped team to write tests
- significantly participated in NodeJS and package upgrade
- participated in TS interaction, also integrated Redis (yes) as a message broker
- felt lots of value fixing bugs, adding features and helping newcomers.

---

### Livius (2018 - 2021)

Tech Lead / Senior Software Developer

#### Technology Stack

- Node.js, TypeScript, Express, NestJS
- MongoDB, Redis
- RabbitMQ
- ELK, Prometheus
- GCP, Kubernetes (GKE)
- Azure DevOps

### **Responsibilities and Achievements**

- cut monolith app to microservices
  - optimized DB structure
  - add logging (ELK, Prometheus)
  - brought unit and integration testing into the project
  - moved the project to Kubernetes (GKE)
- 

## **iConnectel Telecom Ltd. (2014 - 2018)**

Senior Software Developer / DevOps Engineer

### **Technology Stack**

- JavaScript, Python, PHP
- MySQL, DynamoDB
- AWS
- RabbitMQ
- Elastic Stack
- Asterisk, Kamailio, FreeSWITCH

### **Responsibilities and Achievements**

- built a bunch of communication services (voice, video, text) on my own
- continuously worked on infrastructure stability and price optimization
- shared all the knowledge about the project to the team after we moved to production

---

## Picasel Agency (2013 - 2014)

Senior Software Developer / DevOps Engineer

### Technology stack

- Python, Django, Tornado
- Postgres, MongoDB, Redis
- Ansible

### Responsibilities and Achievements

- optimized deployment process on many projects with Ansible
- developed backend with Python/Django

## Freelance (2009 - 2015)

Software Developer / DevOps Engineer
