Soslan Aldatov

About me

Hi! I'm Soslan, and I'm working as a software engineer for about 14 years.

Fun fact about me: I prefer fixing bugs over feature development (it doesn't mean I can't do both) :)

Another fact: I love mentoring newbies, enhancing docs, and working with tech debt to make the project better and more pleasant to work with.

For the last 8-9 years I mostly use JavaScript (Node.js), and the list of languages I've worked with also includes Python (about 2-3 years of experience, still using it from time to time), Golang (from time to time as well), PHP (but I haven't used it for a quite long time). I also like functional programming, and I know some Haskell — although I've never used it for production development.

And here's a short list of things I know and meet often in my work:

- backend development: JavaScript (Node.js), Python, Golang, PHP

- frameworks: Express, Koa, Nest.js, Django, Flask, FastAPI

- databases: Postgres, MySQL, MongoDB, Redis

- message queues: RabbitMQ, AWS SQS, Redis (yeah, it's here as well, thanks to pub/sub)

- VoIP: Asterisk, FreeSWITCH, Kamailio/OpenSIPs, Drachtio, WebRTC

- Amazon AWS, GCP

- Docker, Kubernetes

- Ansible, Chef

- Linux (on a good enough level)

- CI/CD stuff

Feel free to contact me with any questions — and looking forward to work with you soon!

Experience

Profi (2021 - 2023)

Senior Software Developer

Stack:

- Node.js v12 (upgraded to v16), Express, TypeScript (we've moved to it from vanilla JS, and I've taken a fairly significant in this process)

- PostgreSQL, Redis

- WebSocket, Socket.io

- AWS

Responsibilities and Achievements:

- added all tooling and helped team to start writing tests

- actively particificated in NodeJS and package upgrade

- actively participated in TS interaction, also integrated Redis as a message broker

- actively participated in fixing bugs, adding features and helping newcomers.

Livius (2018 - 2021)

Team Lead / Senior Software Developer

Stack:

- Node.js, TypeScript, Express, NestJS

- MongoDB, Redis

- RabbitMQ

- ELK, Prometheus

- GCP, Kubernetes (GKE)

- Azure DevOps

Responsibilities and Achievements:

- led backend team of 5 people

- cut monolith app to microservices

- optimized DB structure

- add logging (ELK, Prometheus)

- brought unit and integration testing into the project

- moved the project to Kubernetes (GKE)

iConnectel Telecom (2014 - 2018)
Software Developer / DevOps Engineer / VoIP engineer

Stack:

- Node.js, Python, PHP

- MySQL, DynamoDB

- AWS

- RabbitMQ

- Elastic Stack

- Asterisk, Kamailio, FreeSWITCH

Responsibilities and Achievements:

- built a bunch of communication services (voice, video, text) on my own

- continuosly worked on infrastructure stability and price optimization

- shared all the knowledge about the project to the team after we moved to production

Picasel Agency (2013 - 2014)
Software Developer / DevOps Engineer

Stack:

- Python, Django, Tornado

- Postgres, Redis, MongoDB

- Ansible, Docker Swarm

Responsibilities and Achievements:

- optimized deployment process on many projects with Ansible and Docker Swarm

- developed backend with Python/Django

Freelance (2009 - 2012)

Software Developer / DevOps Engineer

Stack:

- PHP, Python

- Linux

- VoIP stuff (Asterisk, Kamailio)

Responsibilities and Achievements:

- developed various backend stuff with PHP and Python

- worked as a Linux administrator / DevOps engineer

- worked a lot with VoIP projects
